Paper Snowflake Templates

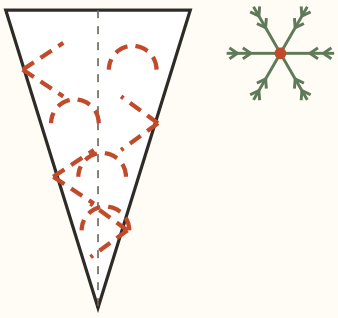

DIY and Crafts • 5 designs • Print, fold, cut along the dashed lines

How to use: print on ordinary white paper. Cut out a square, fold it into a triangle, fold it in half again, then fold it in thirds into a narrow wedge with the point at the bottom — the shape shown below. Cut along the dashed red lines, then open it up slowly. Each snowflake takes about 10 minutes.

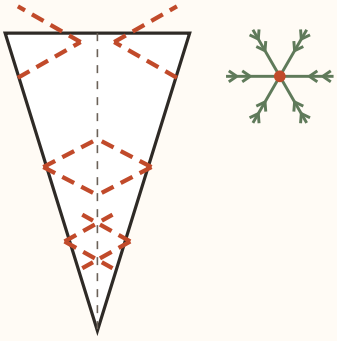

1 Classic

Triangles on both sides

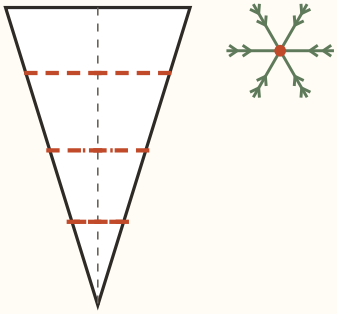

2 Lacy

Many small triangles and half-circles

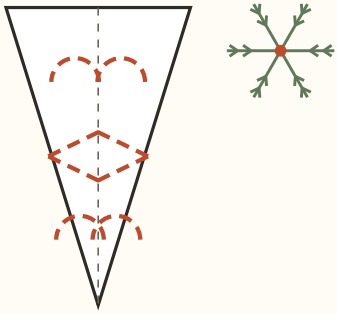

3 Star

Pointed cuts along the top edge

4 Tree

Deep notches like a pine tree

5 Heart

Rounded cuts and a heart tip

Tip: sharp creases make clean cuts. Do not cut all the way across the wedge, or the snowflake will fall apart. Hang finished snowflakes on windows, string them into a garland, or use them as gift tags.
